## LEARNING BY COMPETING EVERYWHERE

LbC continues to make a huge success in the partner countries!

LbC was on the TV news! The winning team from our international competitions was interviewed by a Portuguese TV broadcaster channel - RTP. Representatives of the project and the school emphasised the importance of such initiatives in the students' curricula and professional development.

# LBC ONLINE TRAINING COURSE

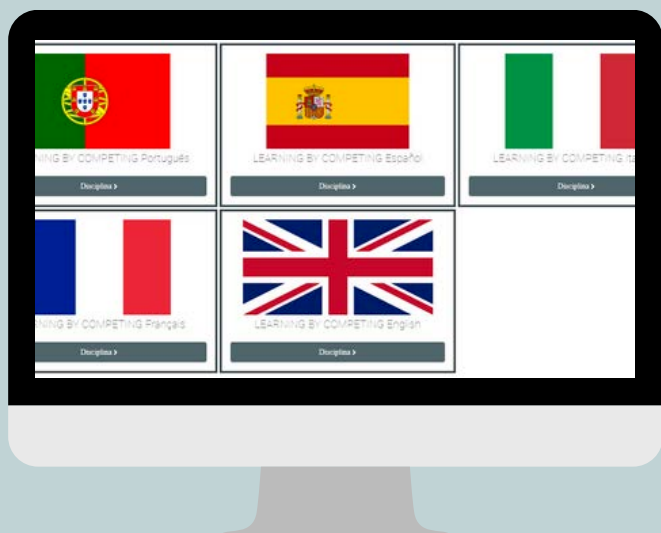

The *Learning by Competing* project implemented knowledge acquisition and learning through competitions and challenges, as it has been proven that this concept helps VET students, who may feel demotivated in class, learn more about robotics in a different environment.

## MODULES

1. Assembly and Control the Robot
2. Line Tracking Robot
3. Ultrasonic Follow Robot
4. Remote Control of the Robot

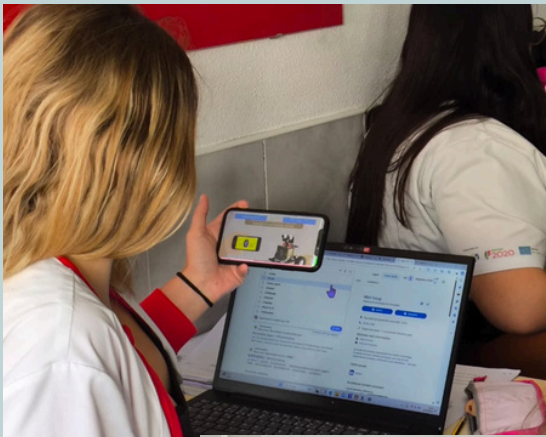

## YOU CAN TAKE PART IN THIS PROJECT!

The platform is available to those who are interested in enrolling in this training. It has its content in 5 languages, guaranteeing access to all people in the countries represented by the consortium.

# TRAINING WORKSHOPS

To assure the sustainability of the project, partners have been active in the schools! These actions have been positively received by the participating organizations!

The partner organizations have implemented different workshops to promote the project results and transfer the LbC methodology into the classroom!

Pupils have enrolled on the training platform and tested the robot's functionalities.

The training modules are being integrated into the VET's training courses, which demonstrates the project results potential and its continuous impact after the funding period!

## PARTNERSHIP
